Project Overview

Context

This project **assesses marketing campaign performance** for campaign categories Safety Net introduced in 2019 and makes recommendations on improving marketing budget allocation for 2024.

Currently, the marketing budget is allocated towards two main areas: **1 – generating signups** and **2 – increasing brand awareness** through clicks.

North Star Metrics

The project uses the following metrics in assessing performance:

Marketing Metrics

Click-Through Rate (CTR)

Percent of people who click on a campaign from among the number of people it reaches (impressions).

Signup Metrics

Signup Rate

Percent of people who sign up to one of Safety Net's plans following a campaign click.

Cost-per-Signup (CPS)

Amount it costs in US\$ to obtain one new customer

North Star Metrics – Current Outlook

Overall North Star Metric details are in line with industry trends.

Marketing Metrics

Click-Through Rate (CTR)

9.39% of people who see a campaign click on it.

Signup Metrics

Signup Rate

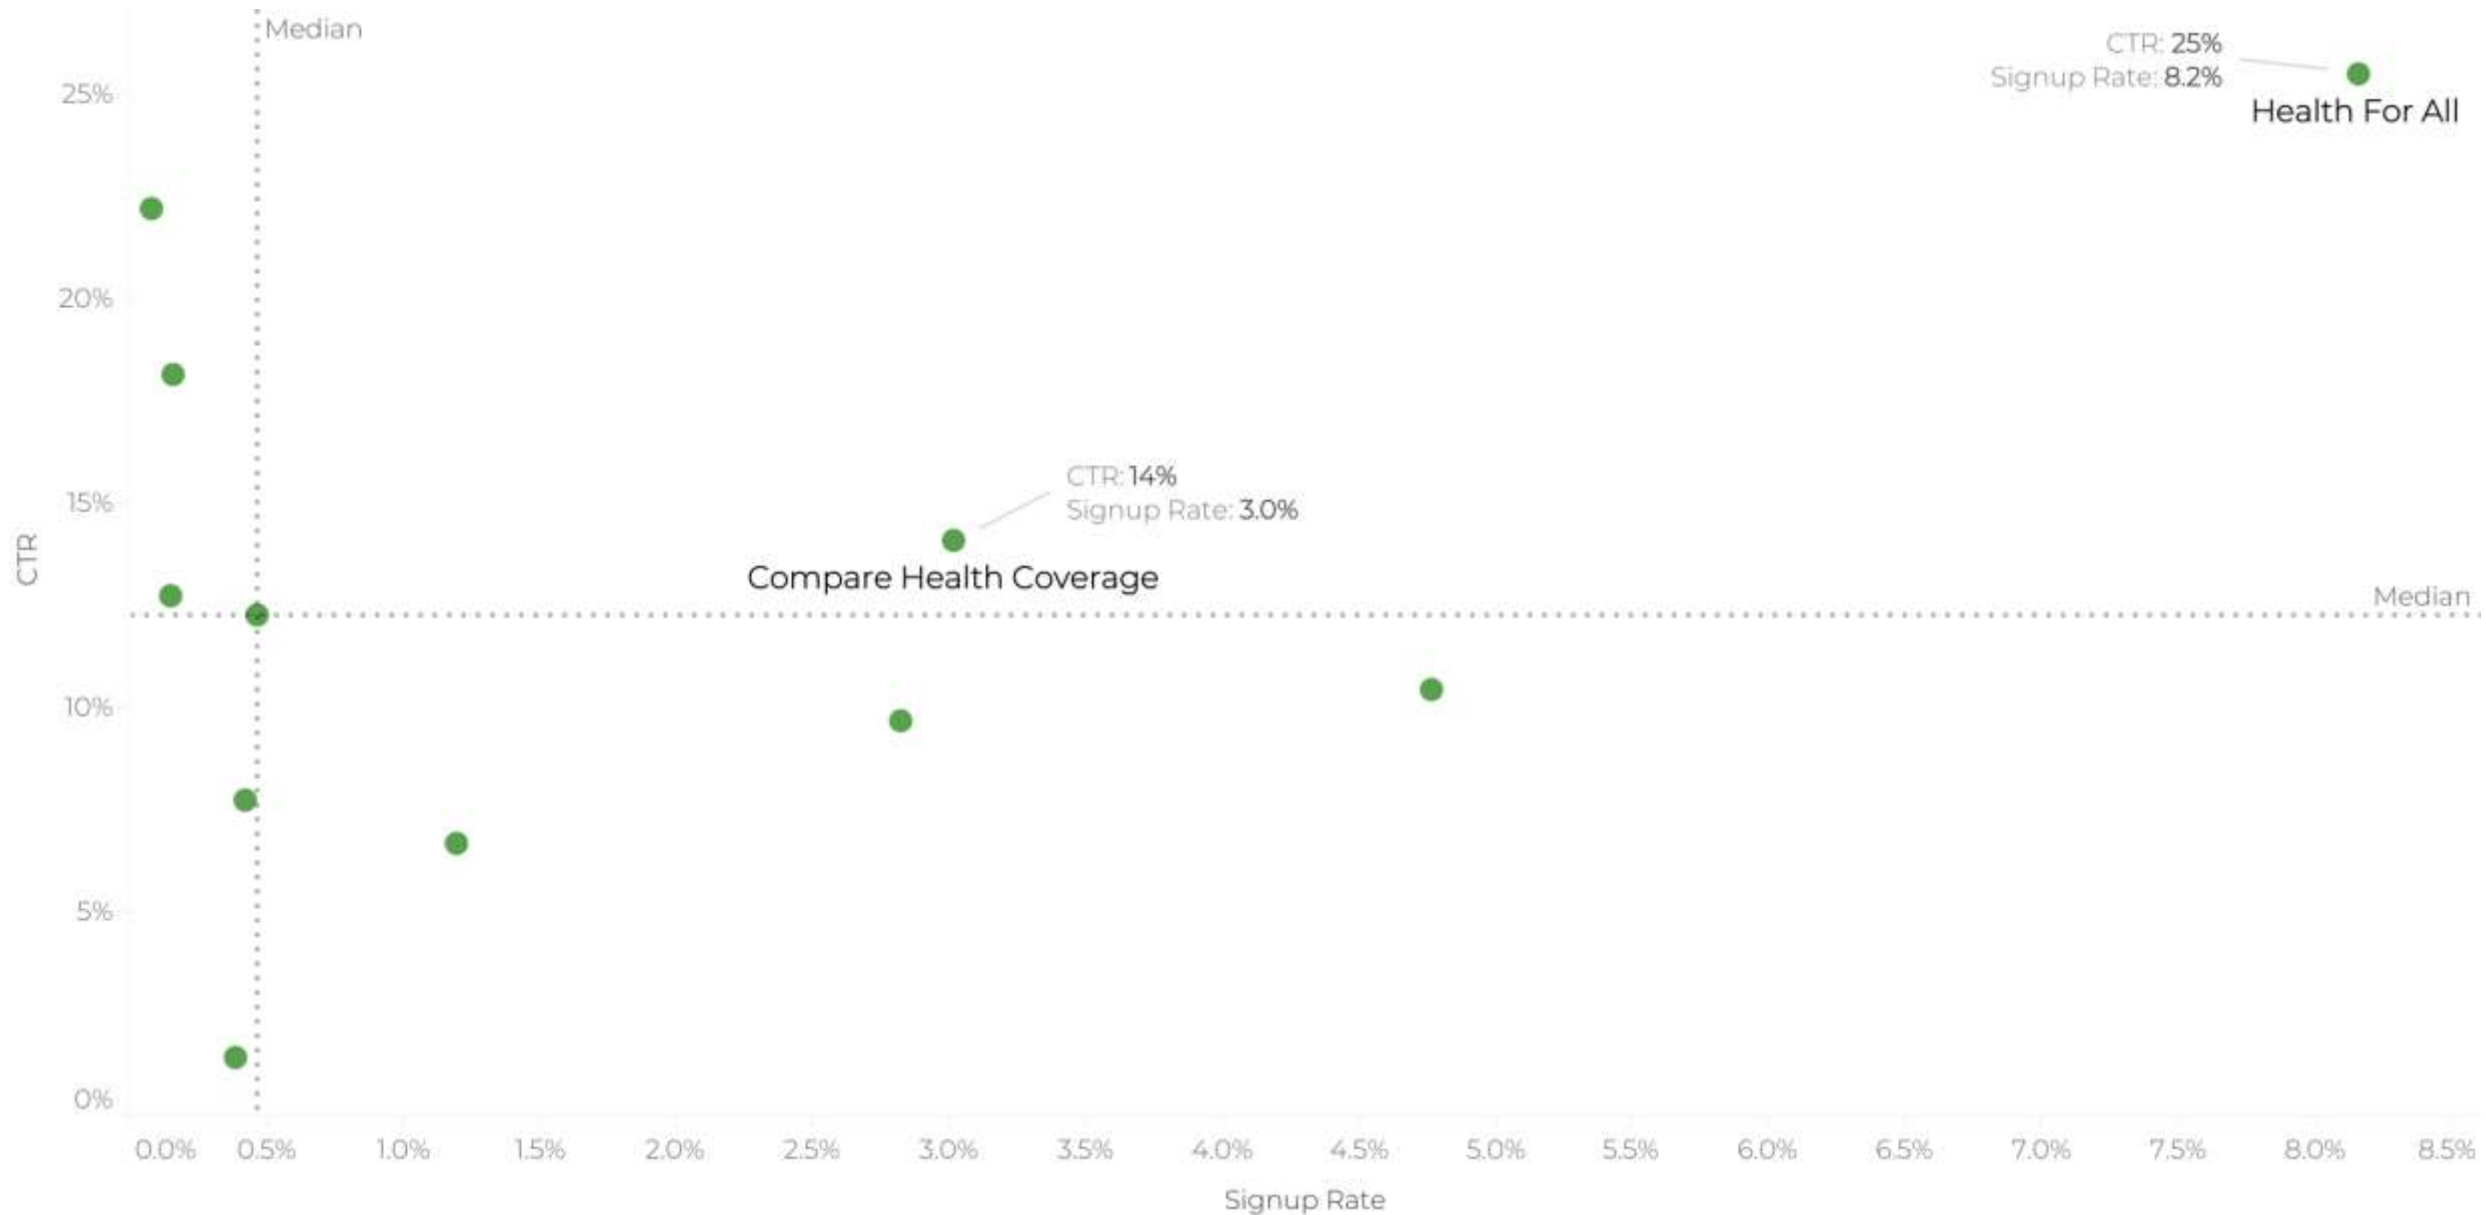

Among the people who click on a campaign, **1.92%** purchase a health insurance plan, amounting to 16,338 customers.

Cost-per-Signup (CPS)

It costs **\$3.68** for a new customer to purchase a plan.

Insights Deep-Dive

Significant Differences within Campaigns: 2 Generate both, Clicks & Signups

Significant Differences within Campaigns: 3 Effectively Generate Signups

Significant Differences within Campaigns: 4 Effectively Generate Clicks

Significant Differences within Campaigns: 2 Fail to Generate Clicks or Signups

Campaign Resource Use: Effective by Best Performers, Ineffective by Worst Performers

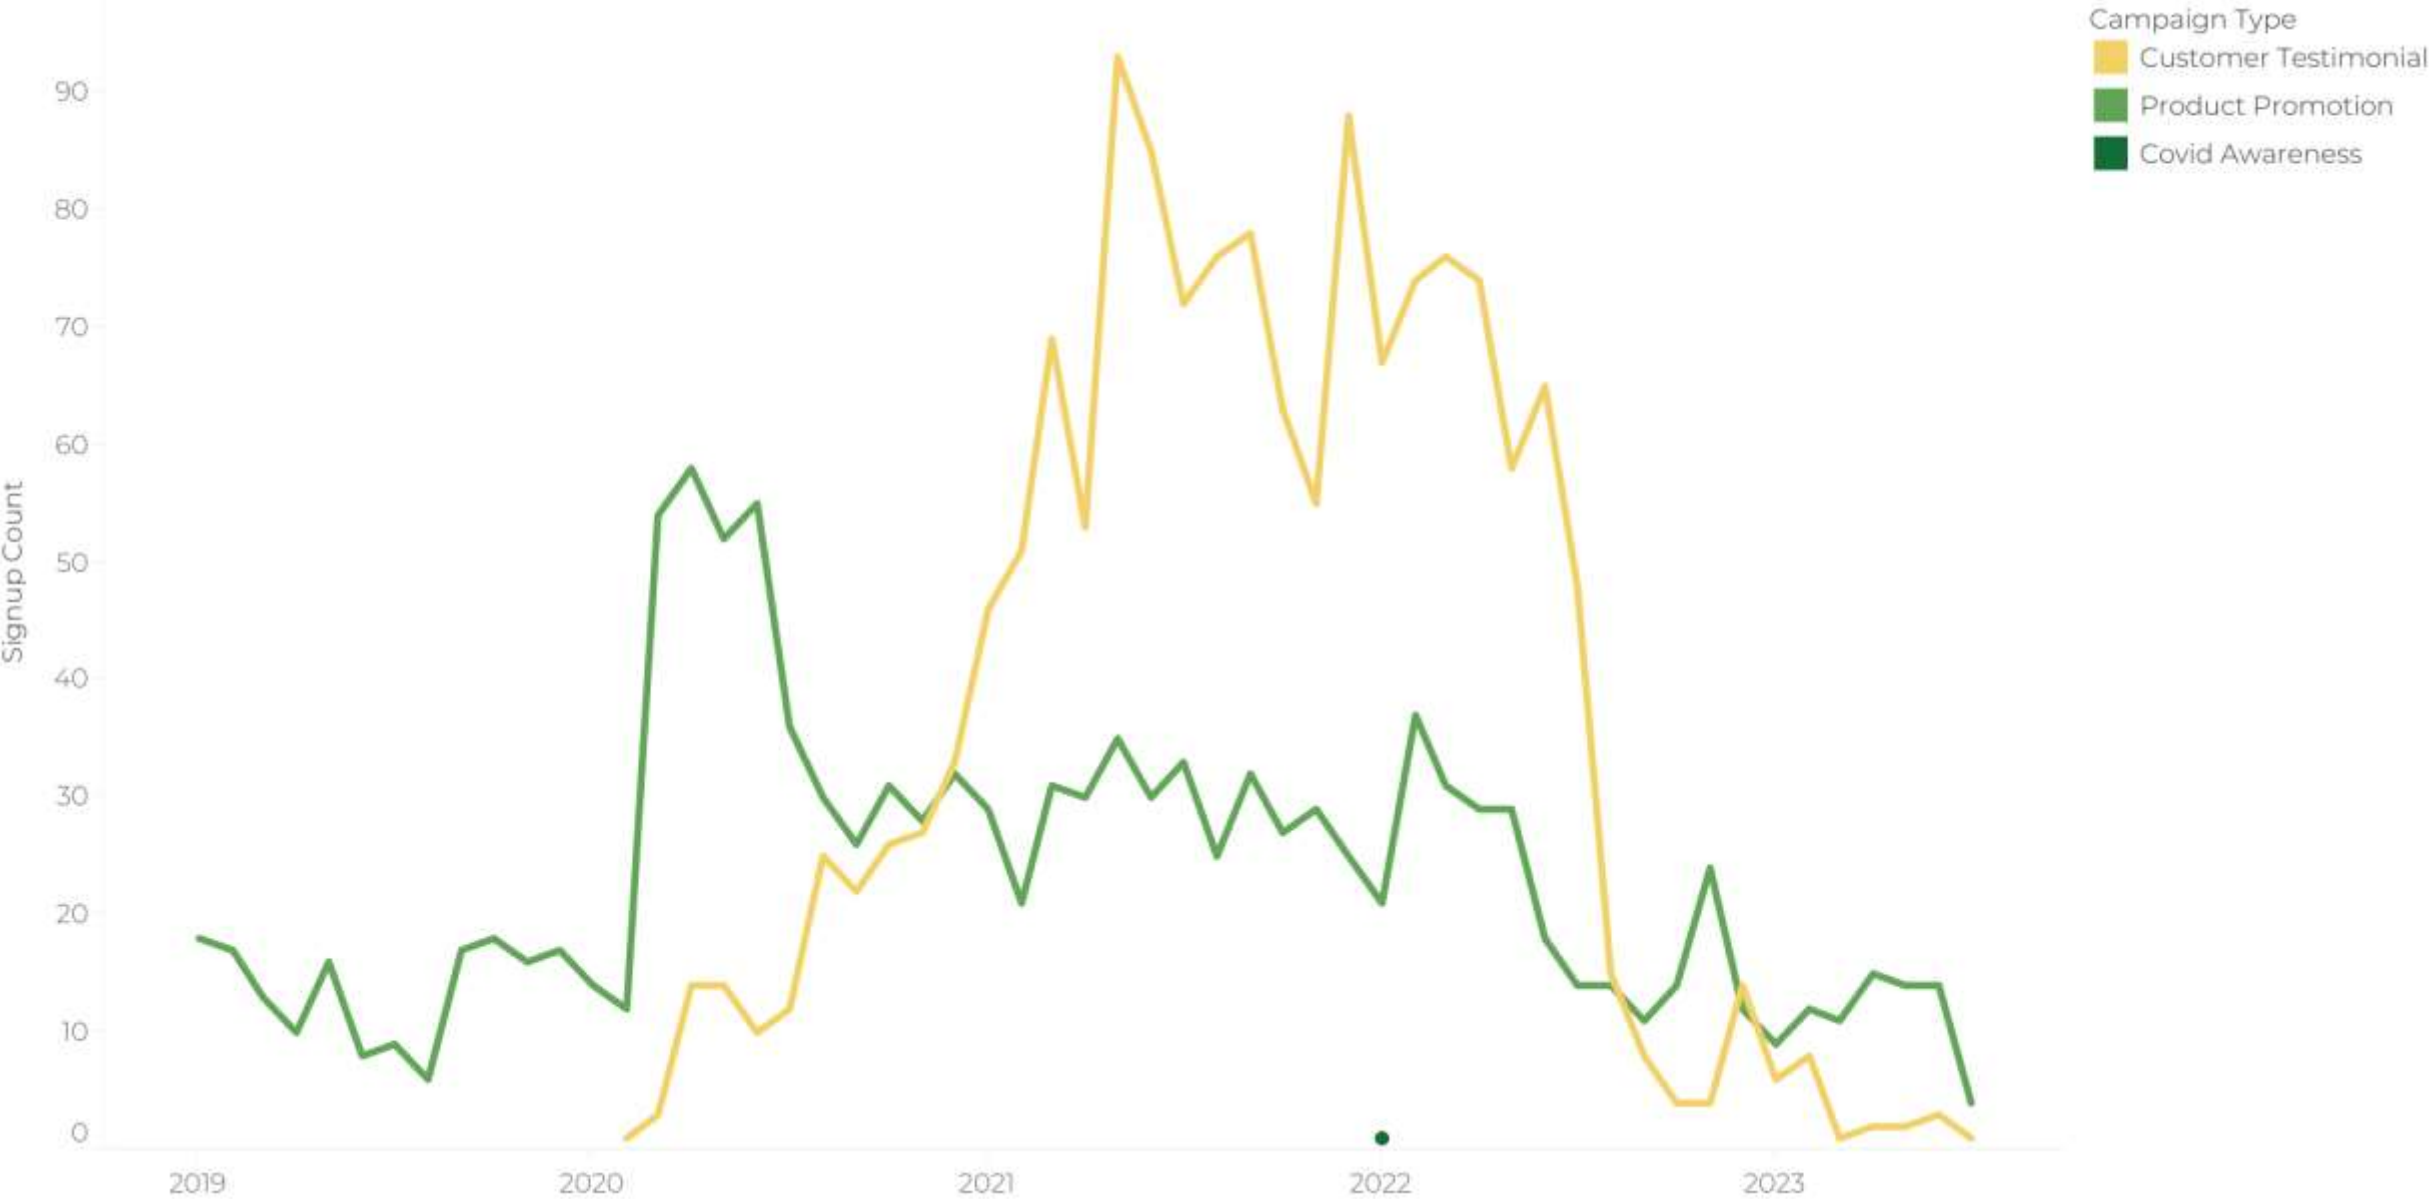

New Signups per Month Peaked during Pandemic across Most Campaign Categories

Compare Health Coverage Peaked Later & Fell Sharply in mid-2022

Customer Testimonial Campaign Type Drove Compare Health Coverage Peak & Fall

Recommendations & Next Steps

Key recommendations

Recommendations either propose to **improve resource allocation** or **adjust marketing & product strategies** for efficiency gains.

Increase Awareness & Signups

- **Reallocate Marketing Budget:** Shift budget from Golden Years Security & #InsureYourHealth to Health For All & Compare Health Coverage campaigns. This leads to a **17% boost in CTR** and a **13% boost in signup rate**.
- **Expand Customer Testimonials:** High CTR of 31%, Signup Rate of 3.5%, and low CPS of \$1.8 within Compare Health Coverage shows immense potential. Expand campaign type to **Health For All, Coverage Matters, and Healthy Living**.
- **Investigate Category-Type Pairs:** Like with Compare Health Coverage & Customer Testimonials, **dive deeper into copy types that work best with specific campaigns** together with the marketing team (see [appendix](#)).
- **Consider Plan Modifications:** High CPS (\$491) and few customers (12) for platinum plan (\$491); average CTR (11%) & low signup rate (0.2%) for bronze plan. Consider **eliminating platinum plan** due to few signups & **improving bronze plan** if desirable.

Caveats & next steps

To improve analysis, we recommend the following:

Address Data Quality Issues:

- Family Coverage Plan had no data on clicks.
- 49 (0.3%) customer signups were not linked to any campaign.
- Combining data from separate tables creates nulls in new dimensions.

Add Dimensions to Improve Analysis:

- Campaign start & end dates to link campaign performance with spend over time.
- First Touch to link marketing channels to signups.
- Customer Claims to explore links between campaign types and claim amount & categories.

Explore Dashboard for Self-Serve Insights:

- Uncover specific insights & visualise trends using Tableau dashboard [here](#).

Thank You

Appendix

Technical Process

Dataset stats:

- 16,338 customer records analysed across 49,998 claims and 57 campaigns.
- Time period under consideration – signups from Jan 2019 to Jul 2023.

Analysis Process:

- Reporting & Insights Manager requested dashboard to self-serve key marketing insights during QBR meetings.
- Analysed stakeholder requirements to define 3 North Star Metrics (Signup Rate, CPS, CTR) & identified key dimensions as campaign categories, category types, signup & claim distributions, plan, & state.
- Loaded Excel data into Tableau Desktop.
- Built self-serve dashboard following skeleton in Tableau using component charts, tables, & graphs.
- Analysed NS Metrics across areas of interest using line graphs, bar charts, scatterplots, and tables to gather insights.
- Loaded Campaign signup, claims, and impressions data into Python.
- Conducted Chi-Square test to determine statistical significance of differences in NS metrics within campaign categories.
- Formulated recommendations based on stakeholder areas of interest.
- Included caveats & future steps in report to dive deeper into analysis – minimal data cleaning was required.
 - Future data cleaning could check for non-sensical values & nulls.

Costs Incurred per Campaign

Campaign Category	
Compare Health Coverage	\$10,043
Summer Wellness Tips	\$7,086
#HealthyLiving	\$6,677
#InsureYourHealth	\$6,573
